Mr. Harold Weisberg,  
Coq D'Or Farm,  
Hyattstown, Md.  
Zone :207 84

Dear Sir:

I am a former Latin American radio announcer and reporter; Ex-member of the " American Newspaper Guild" and now, working in Library Services and Public Relations, for Latin America and the U. S. A.

With great convictions, I have followed all your television appearances and have dropped at the conclusion, that specialization in American education, is the reason for the "One Way Mind"; the same way of thinking that makes a Lawyer, ignore the basic principles of Legal; or Forensic Medicine; Anatomy and other Sciences; all of them familiar to Lyceum Students in Europe and Latin America.

Some years ago, I wrote a comment and addressed it to the "Long Island Press". The subject was: The application of the Phytagorean calculation( The Right Triangle) in relation to the ballistic reconstruction, made by the F. B. I.

As it was reconstructed, the FBI used : a two plazas car; thus varying the inclination of the hypotenuse( in this case, the trajectory of the bullet) while the car used by the President, on the fatal day, was :: a three plazas car ;that is :divided in THREE compartments;:::

All the above mathematical facts, will vary the inclination (or angle) of the bullet; while all the other Right Triangle Relations, will remain the same ;regardless of the size of the triangle (Phytagoras Theorem).

Basically, cathetus a, is the building  
cathetus b, is the street ;from the base of  
the Depository Building , to the Presidents seat.  
The Hypotenuse, will be:the bullet's trajectory.

The sum of the angles of the Rectangle , is ... 180°

The rectabgle is 1/4 of the Circumference.

The car, was "describing " a circle (at least , as a compass;  
giving us a quadrant ".Then , as the front tires are moving  
faster , than the rear tires( Physics) the President was ,in a  
still , position for some seconds...

Now: All the proper computations, can be made by a mathematitians,  
by using the car's speed and of course,all the other relations.  
And , by knowing the still seconds, for the President, we can  
perhaps, know ; the impossibility to fire at the incredible speed  
claimed by the Warren Report.

Mr. Weisberg, I have spoken with my cousin, an engineer graduated from MIT, and he agrees about my "mathematical reasoning". For instance, IF the angle is proven to be LOW, then, the bullets DID NOT come from a SIXTH Floor, but from a place; either Lower or at level with the car. And with the aid of a sextant, the place can be ascertained; at least approximately.

I have received innumerable letters from Honduras, requesting your book. Only today, I found your address, in the December issue of "Publisher's Weekly".

Have you thought of the possibility to translate your book into Spanish? I can give you some good houses in Mexico; one who currently translates and distributes, MacGraw-Hill, French publications and other translations.

I have been a translator; having worked as a proof-reader for five years, when I was a member of the "American Newspaper Guild" (Card # 66- 83 W, issued in 1963).

Too bad you are from this New York -New Jersey area, for if needed, I could find a good secretary (part-time) and in a relative short time, we could translate the book. I read at "above the average"; since I have been a radio announcer, for more than 15 years. We could do it on Saturdays. iiii

Enclosed, is the application I have used. You may inquire about my ability, with Mr. Deegan; or my employer: "Bro-Dart Industries". Library Services. Personnel Mgr: Mr. Joel Levy.
